

High Bush Blueberries

Vaccinium corymbosum

Famous for eating fresh, canning, and freezing, or as a beautiful landscape shrub. Blueberries provide flowers in the spring, colorful berries, good foliage, and striking autumn color. They are self-pollinating, but will produce better if more than one variety is planted. Plants reach maturity in 5-6 seasons and produce 5-10 pounds of fruit annually.

Blueray

Vaccinium corymbosum

4 to 5' Berries ripen a few days before Bluecrop. The large, dark-blue berries (60 berries/cup), with sweet, high-quality flavor, make Blueray an excellent choice for the home gardener. This is a midseason, very hardy, upright vigorous bush that produces large, light-blue, highly tart fruit. Z 3

Northland

3-4'h. Small (136 berries/cup), dark blue fruit with wild flavor. Has limber branches which don't break under heavy snow and adapts well to the sub zero climate. Crops early July. The fruit is a favorite among humans as well as birds, small mammals and box turtles. It is

* Plants can be successfully established without prior pH adjustments if you follow instructions: * Measure/maintain pH levels regularly for best success * Adding sulfur may be necessary to adjust pH * pH: 4.5-4.8 this is very important. It is best to plant immediately after pickup. If you are unable to plant immediately, refrigerate and plant as soon as possible. Do not add water. Keep in original packing to retain moisture.

Jersey Blueberry

Many people who know their berries will tell you this old variety is the best. The berries are not as big as some of the others, but many think the taste is sweeter, and the well-shaped bush is certainly a more handsome shrub.

Jersey is an outstanding variety for the home landscape. And with its famous cold hardiness, you'll be harvesting for years. Grows 4-5' tall. Z 4

*Plant at least 2 varieties 4'-5' apart & 8'-12' between rows * Be careful not to plant too deeply. Keep soil moist throughout the establishment period. * Wait 4-6 weeks after planting before fertilizing to avoid burning roots. * Year 1 – 1oz ammonium sulfate in a circular band around each plant, * Following years – 2oz per plant at bloom time and again 1 month later, * Don't fertilize after July * Avoid fertilizers containing potassium chloride * Mulch with 3"-4" wood chips * Avoid treated or colored bark mulch * Regular manual weeding is necessary

Patriot Blueberries

Patriot blueberry bush is a compact, very cold hardy blueberry plant that consistently produces tasty, extra large size berries. yield between between 10 to 12 pounds per mature bush. Grows 4' high, Z 4

*AFTER CARE: Annual pruning to remove the small branches near the base of the plant and any dead or injured branches is recommended. This promotes an upright vigorous bush that produces larger berries that tend to ripen faster.
