

Front Runner Grader Rake For Sale

Gravel roads and the associated sediment that may runoff them are currently the biggest threat to Maine's lake water quality. Road maintenance is key in preventing gravel roads from potentially eroding into streams and lakes. The Front Runner is a tool which can be used to achieve this goal. Proper road grading has been shown to be a significant portion (20-30%) of annual camp road maintenance and repair expenses.

The Front Runner is a grader/rake attachment that fits onto the front of pick-up trucks utilizing a snowplow mount. It consists of a row of heavy-duty, flexible, spring steel tines individually bolted to a rugged, welded steel frame. A set of adjustable gauge wheels is attached to this frame in front of the tines for support. It is controlled by the truck's snowplow hydraulic hoist.

Please visit the Front Runner Homepage where the developer of the Front Runner, Russ Lanoie, describes the equipment in greater detail. (Rural Home Technology, off-site).

Front Runner grader, extension, and adaptor \$2,500 or b/o.

If you are interested in purchasing this piece of equipment, send your bid in by Sept. 8, 2010 or contact Rosetta Thompson at 778-4279 for more information.
